"Vaccines and Autism Revisited" The Hannah Poling Case. • New England Journal of Medicine. 7 August 2008. Rose, Shannon et al. "Clinical. Autism Onset and the Vaccine Schedule" Revisited ... In the end, all that matters is the science, which clearly shows that there is no association between vaccines and autism. This one study has minimal implications for an alleged connection, except that it clears the most often implicated vaccine " MMR. It also supports other evidence that the onset of autism is earlier than many parents observe and much earlier than formal diagnosis, which calls into question any casual observations about the timing of onset to any potential triggers.
