Cookbook for R - Graphs Graphs My book about data visualization in R is available! The book covers many of the same topics as the Graphs and Data Manipulation sections of this website, but it goes into more depth and covers a broader range of techniques. Bar and line graphs (ggplot2) - cookbook-r.com In ggplot2, the default is to use `stat_bin`, so that the bar height represents the count of cases. Bar graphs of values. Here is some sample data (derived from the `tips` dataset in the `reshape2` package):. Colors (ggplot2) - Cookbook for R Mapping variable values to colors. Instead of changing colors globally, you can map variables to colors " in other words, make the color conditional on a variable, by putting it inside an `aes()` statement.

Legends (ggplot2) - Cookbook for R Note that this didn't change the x axis labels. See Axes (ggplot2) for information on how to modify the axis labels. If you use a line graph, you will probably need to use `scale_colour_xxx` and/or `scale_shape_xxx` instead of `scale_fill_xxx`. Axes (ggplot2) - Cookbook for R Setting tick mark labels. For discrete variables, the tick mark labels are taken directly from levels of the factor. However, sometimes the factor levels have short names that aren't suitable for presentation. Cookbook: ggplot | CIN 401 > p <-ggplot (movies) + geom_histogram (aes (x = rating)) + scale_x_continuous ("Avg. rating (0-10)") + scale_y_continuous ("Count of movies with rating") > ggsave ("plot-movies-histogram.png", p, width = 6, height = 4, dpi = 100) `stat_bin`: binwidth defaulted to range / 30. ggplot2: Cheatsheet for Visualizing Distributions | R-bloggers In the third and last of the ggplot series, this post will go over interesting ways to visualize the distribution of your data. Facets (ggplot2) - Cookbook for R `facet_grid`. The data can be split up by one or two variables that vary on the horizontal and/or vertical direction. This is done by giving a formula to `facet_grid()`, of the form vertical ~ horizontal.
